

Community Solar

Community solar refers to local solar facilities shared by multiple community subscribers who receive credit on their electricity bills for their share of the power produced.

Benefit your business and community with zero costs, and receive reduction on the overall supply costs on your electric bill.

How Community Solar Works:

1. SOLAR FARM

In general, a solar farm in your area is going to generate your clean power.

2. UTILITY COMPANY

The electricity generated by the solar farm is sent to your utility company.

3. YOU

Your electricity will operate as always: no installation, extra costs, or additional downtime.

BENEFITS

Support Clean Energy

Support clean energy & development of renewable generation assets
